

WHAT YOU NEED TO KNOW BEFORE INSTALLING THE WEATHERCAPTURE SOFTWARE UPGRADE

If you have an original WeatherCapture software version (1.2) installed on your computer, please follow the procedure below, prior installing new version (3.1):

1. Open and run the current version of (1.2) "Weather Capture" software.
2. Click **FILE** tab and select from the list "**Clear all Records and Exit**". After selection is confirmed, the program will close automatically.
3. Uninstall the current 1.2 version software by opening a **CONTROL PANEL** on your PC and selecting **ADD/REMOVE PROGRAM**.
4. Clear the memory of the main unit following the procedure below:

Use buttons on the main unit:

- Press & hold **SNOOZE** button – the backlight will light up; immediately press and hold **UP** button and then hold both buttons for 4seconds until the backlight will flash
 - Press **SET** button erasing the memory – you will hear beeping sound with 1 second delay in the following order: "**BEEP**"<1sec off>, "**BEEP**"<1sec off>.
 - Wait until the beeping will stop
 - Uninstall the batteries and unplug the AC/DC adaptor
 - Wait for 10 seconds and re-insert the batteries
5. Connect AC adapter and proceed with operations as advised in the user manual.
